

Initialize new project

1. Npm -l init (This command will create package.json file for the new project)
2. Npm install cypress --save-dev (This command will add cypress dependency in package.json and install cypress in the project)
3. Npx cypress open (This command will open the cypress runner window)

Running tests from cmd

```
Npx cypress run --spec {test file name} --headed --browser chrome --env url="{site url}" --parallel
```

Run BDD tests using script in package.json

```
Npm run cySmokeTest:run
```

```
Will execute the following script - npx cypress run --env tags=@SmokeTest --headed --
browser chrome
```

Generate Cucumber HTML report

```
node .\cucumber-html-report.js
```

after running the above command the index.html will be generated in
acceptanceTests/cypress/cucumberReports/cucumber-report.html/
